

After watching the final lesson it has impacted how I view challenges. What affected me the most was his amazing attitude. Even though he had terminal cancer, he stayed happy and energetic. Instead of focusing on death, he talked about enjoying life and chasing dreams. As a computer science professor, he proved that handling life is just like handling code: you need a positive mindset and a good plan.

I really connected with his message about brick walls. Pausch said that brick walls are not there to stop us. They are only there to show us how badly we want something. I personally hit brick walls when I encounter something frustrating or a new concept is too hard. Instead of quitting, I can use these opportunities to prove how hard I am willing to work.

Finally, I loved his message about helping others achieve their dreams. He went from achieving his own goals, like working for Disney, to mentoring his students. This taught me that programming is more than just writing code for myself. It is about building software and tools that lift up other people and help them succeed.
